PROFESSIONAL SUMMARY

Skilled Senior Full Stack Developer with 6+ years of experience who independently manages, troubleshoots, improves, and maintains web applications from front-end to back-end: responsive HTML, CSS, JavaScript, React.js, and Next.js front ends; Node.js, .NET, and Express back ends with PostgreSQL, MySQL, and MongoDB, plus cross-platform Android and iOS apps with React Native. Provides technical leadership through code reviews, mentoring, and sprint planning, and owns the full lifecycle in production: API integration, performance optimisation (Core Web Vitals, caching, query tuning), security hardening (JWT, RBAC, OWASP practices), Git-based workflows, CI/CD deployments across staging and production, database backups, and Sentry monitoring. Improves website health and search visibility through technical SEO, and uses AI-assisted development tools such as Claude Code, Cursor, GitHub Copilot, and ChatGPT to deliver and debug faster.

CORE TECHNICAL SKILLS

Front-end: HTML5, CSS3, JavaScript (ES6+), TypeScript, React.js, Next.js, Vite, Redux, Angular, Material UI, Bootstrap, SASS/SCSS, Responsive and Cross-Browser Development

Mobile: React Native, Cross-Platform Android and iOS Development, Xcode, iOS Builds and Debugging, Responsive Mobile Web

Back-end and APIs: Node.js, Express.js, .NET (C#), Python, Laravel, Spring Boot, RESTful APIs, GraphQL, WebSockets, Webhooks, Third-Party API Integration, Kafka, RabbitMQ

Databases: PostgreSQL, MySQL, MongoDB, Redis, Schema Design, Query Optimisation, Indexing, Migrations, Backup and Restore

Performance: Core Web Vitals, Lighthouse, Redis Caching, Code Splitting, Lazy Loading, Image and Asset Optimisation, Database Query Tuning

Security and Maintenance: JWT Authentication, Role-Based Access Control (RBAC), OWASP Best Practices, HTTPS/SSL, Input Validation, Dependency Updates and Patching

Deployment and Monitoring: Git, GitHub, CI/CD Pipelines, Docker, Kubernetes, Staging and Production Environments, Coolify, DigitalOcean, AWS, Azure, Automated Backups, Sentry, Structured Logging, Health Checks, Uptime Monitoring

Technical SEO: Server-Side Rendering (Next.js), Meta Tags, Structured Data (Schema.org), XML Sitemaps, robots.txt, Canonical URLs, Google Search Console, Site Health Audits

Debugging and Testing: Chrome DevTools, Jest, React Testing Library, Root-Cause Analysis, Incident Triage, Code Review

AI-Assisted Development: Claude Code, Cursor, GitHub Copilot, ChatGPT; also builds AI features with LLMs, RAG, embeddings, and Whisper speech-to-text

Integrations: Stripe, Razorpay, Twilio, Telnyx (Voice, SMS, WhatsApp Business), Scheduling APIs

Leadership: Technical Leadership, Team Mentoring, Code Review, Sprint Planning, Stakeholder Communication, Agile/Scrum

Domains: Banking and Fintech, E-commerce and Retail, Payments, Real Estate, SaaS, CRM

PROFESSIONAL EXPERIENCE

Senior Full Stack Developer (Senior Software Engineer) **Oct 2024 – Sep 2026**

TeraLeads | United Arab Emirates

- Independently owned TeraCRM end to end with React.js, Next.js, Node.js, TypeScript, PostgreSQL, and MongoDB, one of three production products, covering features, bug fixes, API integrations, and ongoing maintenance.
- Architected a multi-tenant AI voice-agent SaaS platform and companion React Native app for Android and iOS (built and debugged in Xcode), and built voice agents using RAG, embeddings, Whisper transcription, and real-time WebSockets, including an Arabic-language agent.
- Integrated Twilio, Telnyx, Stripe, Razorpay, and scheduling APIs through webhook-driven pipelines with Kafka and RabbitMQ queues, connecting payment, communication, and appointment data in one workflow.
- Improved application performance with Redis caching, PostgreSQL query and index tuning, and front-end optimisation against Core Web Vitals, keeping the platform responsive under concurrent tenant load.
- Secured services with JWT authentication, RBAC, strict tenant isolation, input validation, and regular dependency updates, protecting each business's data.
- Ran Git-based CI/CD with Docker and Kubernetes through Coolify on DigitalOcean, with separate staging and production environments, automated database backups, Sentry monitoring, structured logging, and health checks.

- Provided technical leadership across the product portfolio: set coding standards, led code reviews, mentored developers, planned sprints with stakeholders, and tracked KPIs (bug escape rate, MTTR, uptime, sprint delivery).
- Diagnosed and resolved production incidents through root-cause analysis, keeping web and mobile releases stable.
- Used AI-assisted development tools (Claude Code, Cursor, GitHub Copilot, ChatGPT) to speed up feature delivery, refactoring, test writing, and debugging, reviewing all generated code before merge.

Tech Stack: React.js, Next.js, Vite, React Native (Android, iOS), Xcode, TypeScript, Node.js, Express.js, GraphQL, PostgreSQL, MongoDB, Redis, Kafka, RabbitMQ, Jest, Docker, Kubernetes, CI/CD, Git, Sentry, Stripe, Twilio, Telnyx, Claude Code, Cursor, GitHub Copilot

Senior Software Engineer **Aug 2023 – Oct 2024**

DAMAC Properties | Dubai, United Arab Emirates

- Built and maintained five enterprise web applications for sales, HR, and IT with responsive, cross-browser React.js front ends and Node.js/Express REST APIs.
- Automated property-sales commission processing with configurable business rules and detailed reporting, replacing error-prone manual spreadsheet calculations across the sales organisation.
- Built a brokerage platform for property listings, client management, and transaction tracking, giving brokers, buyers, and sellers one shared channel for deal progress.
- Delivered a rental guarantee scheme application, an IT asset procurement workflow with automatic approval routing, and a candidate-to-employee onboarding system with three hiring flows for GCC, UAE, and international hires.

Tech Stack: React.js, Redux, TypeScript, JavaScript, HTML5, CSS3, SASS, Material UI, Node.js, Express.js, REST APIs, Jest, Git

Full Stack Developer (promoted from Software Engineer) **Nov 2019 – Jul 2023**

Profecia Links | Pune, India

- Contributed to Arafx, a configurable low-code SaaS platform for workflow management, CRM, and asset tracking, using React.js, Next.js, SASS, and Spring Boot.
- Developed Starkey, a social media management platform unifying five networks with content scheduling and engagement tracking, using PHP, Laravel, Angular, and MySQL.
- Delivered public-facing websites Rise Tool (school selection) and Viograh (classifieds and family tree), applying technical SEO with server-side rendering, meta tags, sitemaps, and page-speed optimisation.
- Built Node.js, Express.js, and .NET services and REST APIs, and resolved production issues with cross-functional teams across Agile/Scrum sprints.

Tech Stack: React.js, Next.js, Angular, HTML5, CSS3, JavaScript, Node.js, Express.js, .NET (C#), Laravel, PHP, Spring Boot, Java, MySQL, SASS, REST APIs, Git

EDUCATION

Master of Computer Science, Computer Engineering Mar 2021 – Mar 2023

Savitribai Phule Pune University, India

B.Sc. Computer Science, Computer Programming 2017 – 2020

Savitribai Phule Pune University, India

LANGUAGES

English (Professional), Hindi (Native)
