## PROFESSIONAL SUMMARY

Senior Full Stack Developer with 6+ years building and shipping production web and mobile applications across AI-driven SaaS, CRM and enterprise real-estate platforms. Currently at TeraLeads, where I architected and delivered the company CRM end to end — data model, backend services and front-end interface — and built Zoie, a multi-tenant AI voice-agent platform with a companion React Native mobile app. Strong across React.js, TypeScript, Node.js, Angular, Laravel/PHP, PostgreSQL and Redis, with a consistent record of replacing manual business processes with automated systems. Own the full delivery lifecycle — requirement gathering, build, CI/CD deployment on Coolify, and production monitoring with Sentry — working closely with cross-functional product, design and business teams.

## TECHNICAL SKILLS

**Frontend:** React.js, Next.js, React Native, Angular, TypeScript, JavaScript (ES6+), HTML5, CSS3, SASS/SCSS, Material UI (MUI), Bootstrap, React Hooks & Context API, component architecture, reusable component patterns, responsive design, cross-browser compatibility, Core Web Vitals & frontend performance

**Backend & APIs:** Node.js, Express.js, Laravel, PHP, Spring Boot, Java, RESTful API design, webhook-driven event pipelines, JWT & role-based authentication, multi-tenant SaaS architecture, per-tenant data isolation, background/async processing

**Databases & Caching:** PostgreSQL, MySQL, Redis, schema & data modelling, query optimisation, indexing, migrations, connection pooling

**Telephony & Integrations:** Twilio and Telnyx (programmable voice, SMS, WhatsApp Business, number provisioning, SIP), AI voice agents, third-party CRM & scheduling APIs, webhook-driven event pipelines

**DevOps & Deployment:** Coolify (self-hosted PaaS), Docker, CI/CD pipelines, Git-based automated deployments, staging & production environments, environment & secrets management, database migrations, Nginx reverse proxy, SSL/domain configuration, Linux server administration

**Monitoring & Observability:** Sentry (API error tracking & alerting), server load & resource monitoring, structured request logging with per-request tracing, API health checks, uptime tracking, incident triage & root-cause analysis

**Practices & Tools:** Git, GitHub, Agile/Scrum, code review, workflow automation, requirement analysis, VS Code, IntelliJ, Linux, Windows

**Additional Languages:** C, C++

## PROFESSIONAL EXPERIENCE

TeraLeads — Senior Full Stack Developer

2024 - Present

Own end-to-end delivery across three products: **Zoie** (AI voice-agent platform + mobile app), **TeraCRM**, and the Zoie public website.

- Zoie — AI Voice Agent Platform & CRM:** Designed and built a multi-tenant platform where an AI voice agent answers inbound business calls, books and reschedules appointments, and handles after-hours enquiries, writing outcomes back into the customer's scheduling system.
- Zoie CRM:** Delivered lead and contact management, call records and transcripts, phone-number provisioning, and per-business voice-agent configuration — giving each client a single view of every call and booking generated by the agent.
- Zoie Mobile App:** Built the companion mobile application in React Native so business owners can review calls, manage appointments and respond to leads from their phone, extending platform reach beyond desktop.
- TeraCRM:** Architected and built the company CRM end to end — data model, backend services and React front-end — replacing manual lead handling with a single system of record for the sales pipeline, alongside the lead-generation platforms feeding it.
- Telephony & communications layer:** Integrated both Twilio and Telnyx for programmable voice, SMS and WhatsApp Business messaging — number provisioning, sender registration, call routing to the AI agent and webhook-driven event handling — giving the platform multi-provider coverage rather than a single-vendor dependency.
- Backend & performance:** Built a multi-tenant Node.js/PostgreSQL backend with JWT authentication and strict per-tenant data isolation; introduced Redis caching and resolved connection-pool limits to stabilise API latency under concurrent load.
- Third-party integrations:** Scoped and drove integrations with external practice-management systems, evaluating partner APIs and aggregator platforms for appointment read/write and webhook support, and led the partner-access process.
- Deployment & CI/CD:** Own deployment across all three products using Coolify as a self-hosted PaaS, with Git-based CI/CD pipelines, containerised builds, separate staging and production environments, and managed environment variables.
- Monitoring & observability:** Instrumented the platform with Sentry for API error tracking and alerting, structured request logging with per-request tracing, API health checks and server load monitoring — cutting time-to-detection on production issues.
- Engineering quality:** Defined and tracked delivery KPIs — bug escape rate, sprint on-time delivery, MTTR, API/integration uptime and Core Web Vitals — making release quality measurable across all three products.

Tech: React.js, TypeScript, React Native, Node.js, Express, PostgreSQL, Redis, Twilio, Telnyx, REST APIs, Docker, Coolify, Sentry, CI/CD, Git

DAMAC Properties — Software Engineer

2022 - 2024

Dubai, United Arab Emirates

Built in-house enterprise applications used daily across sales, HR and IT operations at one of the region's largest property developers.

- Commission Management:** Developed an in-house commission calculation application that automates property-sales commission against configurable business rules, with sales-data entry and detailed reporting — eliminating error-prone spreadsheet calculation for the sales team.
- Brokerage Platform:** Built a comprehensive brokerage application supporting property listings, client management and transaction tracking, enabling seamless communication between brokers, buyers and sellers.
- Rental Guarantee Scheme:** Delivered an application to manage and streamline rental guarantee processes, ensuring landlords receive timely payments even in the event of tenant default.
- IT Consumables:** Built an asset request and approval workflow for laptops and IT equipment, automating procurement routing and significantly reducing request processing time.
- Employee Onboarding:** Developed an internal candidate-to-employee conversion system with multi-stage approvals and distinct process flows for GCC, UAE and international hires.

Tech: React.js, JavaScript, TypeScript, Material UI, HTML5, SASS, REST APIs

**Profecia Links — Software Engineer → Full Stack Developer****Nov 2019 - 2022***Pune, India*

Delivered client-facing SaaS and web products across the full stack, from database through UI.

- **Arafx (Ara Framework):** Contributed to a low-code SaaS platform built on the principle of “build by configuration, not by code,” allowing admins and business users to create workflow management, CRM and asset-tracking modules without developer involvement — reducing new business functionality from months of team effort to days for one person. Deployable in cloud or on-premise.  
*React.js, Next.js, SASS, Spring Boot*
- **Starkey:** Built a social media management platform unifying Facebook, Instagram, Twitter, LinkedIn and YouTube in one place, with content scheduling for later publishing, agency/organisation management and audience engagement tracking.  
*PHP, Laravel, Angular 10, HTML5, SASS, Bootstrap, MySQL*
- **Rise Tool:** Developed a school-selection platform that scores institutions on academic performance and disaster-safety criteria, helping parents evaluate schools on data rather than reputation alone.  
*React.js, Laravel*
- **Viograh:** Built a classified and family-tree platform where users add family members, build a family tree, and schedule birthdays, meetings and events, with full account management.  
*HTML, SASS, Bootstrap, JavaScript, Laravel*

**EDUCATION****M.Sc. Computer Science** — Savitribai Phule Pune University, Pune, India**May 2023****B.Sc.
